Decontamination work under the highest security

Especially weakly bound asbestos products such as sprayed asbestos present great challenges when it comes to the protection of workforce and the environment during the removal of such materials from structures. Sprayed asbestos, for instance, is suctioned off directly at the site of removal and permanently bound using hydraulic binding agents, packed and – when fully hardened – finally stored at a dump site authorised for the purpose.

However, the safety of its employees when handling hazardous substances is equally important to PORR as the protection of the environment. It only employs highly qualified rehabilitation personnel and protective measures such as full body suits and respiratory masks are indispensable standards.

Apart from the disposal of asbestos, PORR Umwelttechnik also performs analyses and decontamination jobs in rooms featuring high levels of PAK and PCB, mercury, lead, arsenic, cadmium and many other toxic substances.

Impressions

Image notes

1

Asbestos rehabilitation.

When PORR Umwelttechnik performs decontamination jobs, its employees' safety is its top priority.

2

Decontamination.

When hazardous substances are involved, PORR Umwelttechnik only deploys highly qualified experts.
