

Decontamination at Penzinger Strasse 76

Data and facts

Company PORR Umwelttechnik GmbH in ARGE

Type Asbestos and pollutant removal

Runtime 04.2016 - 05.2017

Principal Prajo & Co GmbH

[Project report online](#)

www.porr-group.com

Decontamination of a polluted industrial site.

Four zones covered the removal of the sprayed asbestos coatings from the façades of the newer buildings, while another three involved removing the floors containing PAH in the older buildings. Over a period of around twelve months, the team of specialists at PORR Umwelttechnik removed building materials containing harmful substances from around 5,700m² of façade and roughly 5,400m² of floor area. This allowed the buildings to be demolished safely

Impressions

Image notes

1

Removing the parts of the wood block floor containing PAH.

Many polycyclic aromatic hydrocarbons (PAHs) have carcinogenic or mutagenic properties, or are harmful to reproductive health. They are considered toxic to humans and other organisms and remain in the environment for a very long time.
